K. Tharuna Sri

Machine Learning

PROFILE

: Highly motivated Computer Science graduate with foundational expertise in Java and Python. Seeking an entry-level Software Developer role to apply analytical problem-solving skills toward building scalable web applications

CONTACT

Email: tsri8685@gmail.com
Phone: 9949969085
Location: Hyderbad, INDIA

SKILLS

• Python
• Flask
• C
• SQL

LANGUAGES

• English
• Telugu
• NPTEL certificate with 65%

PROFESSIONAL SUMMARY

: Highly motivated Computer Science graduate with foundational expertise in Java and Python. Seeking an entry-level Software Developer role to apply analytical problem-solving skills toward building scalable web applications

EDUCATION

Loyola Academy
B.Sc. in Machine Learning
Hyderabad, Telengana
Graduation Year: 2027
Score: 9.6 CGPA / 96%

PROJECTS

Movie Recommendation System,
• Implemented collaborative filtering and content-based algorithms.
• Achieved 85%+ accuracy using matrix factorization techniques.
• Designed personalized recommendation engine with real-time predictions.
• Architected a sophisticated recommendation system utilizing collaborative filtering and matrix factorization to enhance user engagement.
• Optimized model performance to achieve 85%+ predictive accuracy across diverse user datasets.
• Engineered real-time prediction pipelines for seamless integration into production environments.

House Price Prediction,
• Applied ARIMA and Prophet models for time-series forecasting.
• Achieved RMSE of 5-8% on validation datasets.
• Built interactive dashboards for trend visualization and insights.
• Leveraged ARIMA and Prophet models to deliver high-precision time-series forecasting for critical business metrics.
• Minimized forecasting error, achieving a significantly low RMSE of 5-8% across validation cycles.
• Designed interactive visualization dashboards to translate complex data trends into actionable strategic insights.

Image Analysis,
• Designed CNN architecture using TensorFlow/PyTorch.
• Applied data augmentation and transfer learning techniques.
• Achieved 92%+ accuracy on image classification benchmarks.
• Engineered deep learning architectures using CNNs and Transfer Learning to solve complex computer vision challenges.
• Optimized training efficiency by implementing data augmentation and automated hyperparameter tuning.
• Surpassed industry benchmarks with a 92%+ accuracy rate on competitive image classification tasks.

Developing Department Web Page.
• Built full-stack web application with responsive UI and scalable backend.

• Implemented authentication, database management, and REST APIs.
• Deployed with Docker and integrated GitHub CI/CD pipeline.
• Spearheaded the design and deployment of a full-stack web application featuring a responsive UI and scalable backend infrastructure.
• Integrated secure authentication protocols, efficient database management, and high-performance REST APIs.
• Automated the deployment lifecycle using Docker containers and robust CI/CD pipelines.
